

Make every penny count with NetSupport DNA

With school budgets being slashed, now more than ever, schools need to make their funds go further and ensure every penny is utilised and not wasted. NetSupport DNA, our complete solution for schools that includes IT asset management, classroom management *and* safeguarding tools, can help you do just that...

### Make informed decisions on hardware

NetSupport DNA gathers a huge amount of system data from each of your devices: from CPU and BIOS types, to network, video and storage information – saving your school the cost of you having to collect it and record it manually, and freeing up your time for other tasks!

From the DNA console, you can run hardware inventory or software licence reports for a single device, department or bespoke group to view all relevant information. At a glance, you can see which PCs can be upgraded rather than replaced or where PCs can be redeployed to other staff or students; avoiding unnecessary purchases by reusing existing kit instead. The additional DNA Mobile app (smartphone and tablet) provides information about a device's inventory and licences, plus a full history of recent changes, as well as highlighting any outstanding alerts. It even provides a QR code scanner to help quickly identify PCs.

### Save money on software licensing costs

DNA is designed to keep track of the licences you have installed and help to reduce unnecessary spending on licences that are not needed – as well as avoid potential fines for using more licences than you own.

The module provides a detailed summary of all installed software, so you can instantly see what is on each of your PCs. And to alert you to even greater cost savings, DNA also highlights PCs with software that have no or low usage – allowing you to reallocate it to the staff or students who need it most, thereby avoiding costly renewals for software that you no longer require.

As an added bonus to help you track your software spending, the Software module has the ability to record all the “extras” associated with software management (e.g. supplier details, invoice details, contract renewal dates), giving you the opportunity to make active and considered decisions on renewals.

### Why monitoring application use is good for your budget

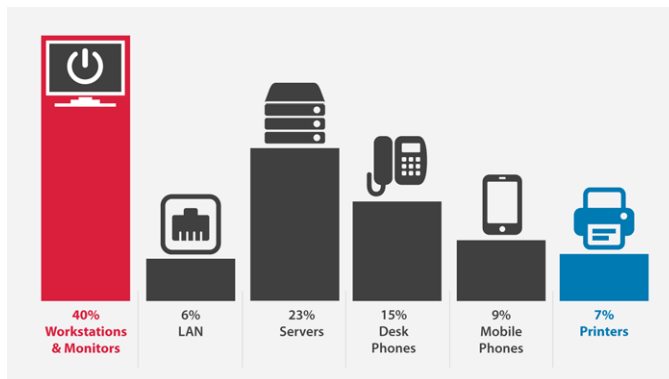

Monitoring applications ensures software licences are assigned to the right staff and students based on their usage level. It highlights which users are using applications, programmes and even store apps more than others, showing where licences are needed most. Armed with this information, you can reallocate applications to where they will be most used, restrict use to specific devices and save additional licence spend or maintenance renewals on applications that are proven to be underused.

## Do you know how much your enterprise could save on energy costs?

NetSupport DNA's Energy Monitoring and Power Management tools keep you informed by showing you how many PCs are left on out of hours – and, most importantly, how the costs of this can significantly add up over time. You can set Power Management policies allowing selected PCs to be set to automatically power off and power back on – all at once, or in stages – the next morning. In addition, “inactivity policies” can be applied, allowing rules to be applied for systems to sleep, log out or power down if they have been inactive over a period of time.

A standard PC continuously left on consumes more than **700kWh per year - more than a fridge.**

NetSupport DNA can begin to provide you with the awareness you need to start saving from day one.

## Cut your printing expenditure

Another easy save for schools is to cut back on printing costs. Unnecessary printing can often spiral out of control, incurring high paper and toner costs.

**“In an average sized school, the cost of student printing alone is estimated at £150,000 per year.”**

[www.qaeducation.co.uk/2015](http://www.qaeducation.co.uk/2015)

The high-level Print Monitoring component of NetSupport DNA shows you exactly where your print costs are being generated, allowing you allocate costs accordingly.

## All of your lease and contract details in one place – where they belong

DNA bridges the gap between IT and Purchasing, allowing you to keep copies of actual lease and maintenance contracts (and other associated details) recorded alongside the correct devices and software licences too. You can also include supplier details, contract term dates and costs – increasing your awareness of renewal dates and allowing you to retain control and make active, informed decisions about future planning and spending.

## Alerts

Tackling big IT problems can take significant amounts of time – affecting staff and students and sometimes incurring financial costs. So, to help you work proactively to maintain your network (rather than fixing it reactively), NetSupport DNA gives you a complete alerting suite that allows you to monitor hundreds of scenarios and warn you when problems occur – or, better still, before they occur – to avoid lost productivity, such as when a particular PC or server is struggling (and any wider impact across your network); where licence usage counts are reaching limits (to avoid any potential exposure to non-compliance fines) or when software has been uninstalled from a PC so it can be re-deployed elsewhere.
