

Manage your IT and enhance your GDPR compliancy with NetSupport's tools

Now that the new **General Data Protection Regulation (GDPR)** has come into effect (since 25th May 2018), organisations must find the tools and resources to meet the requirements, despite many being financially challenged.

Our IT Asset Management solution, NetSupport DNA, already helps businesses manage their technology – plus, it offers tools to assist with GDPR requirements at no extra cost...

Data protection

- The **software licensing** module allows organisations to keep track of software installed and whether it is GDPR-compliant – as well as ensuring that their data is secure and stored correctly.

Discover Information you hold

- Using NetSupport DNA's **file discovery**, a data manager can quickly scan all or selected network PCs and identify all file types that may contain confidential information about staff.
- Using the **remote control** features, technicians can also quickly access a PC or laptop on the network to remove or move any files that should not be there.

Prevent data breaches

- NetSupport DNA's **endpoint security** and alerting features will automatically notify operators when any number of changes occurs across the network.
- Data on **USBs can stay protected** via individual memory sticks being "authorised" in NetSupport DNA – for the current day, a week or indefinitely – and the use of sticks in the organisation can then also be limited to only those authorised.
- NetSupport DNA can also **control its usage** by allowing full access, block all access, allow read-only access or prevent applications being run from an unknown memory stick

Individuals' rights

- Within the database and administration sections of NetSupport DNA, organisations can identify a member of staff and instantly **archive or remove all data** history related to them in NetSupport DNA.

With NetSupport DNA, Network Managers gain a wealth of IT asset management features to effectively track, monitor and manage IT assets and endpoints across a business – from one central point. Armed with a complete overview of IT activity, NetSupport DNA helps technicians work smarter whilst maintaining a secure and reliable network.
