

Make every dollar count with NetSupport DNA

Now, more than ever, businesses need to make funds go further and ensure every dollar is used wisely. NetSupport DNA, our complete solution that includes cross-platform network and IT management, data security, and support tools, helps you do just that...

Make informed decisions

Supporting up to 10,000 devices, NetSupport DNA allows you to run hardware inventory or software license reports for a single device, department, or bespoke group in your school and see all relevant information. You can identify which PCs are upgradeable, which ones need to be replaced, and which ones could be more effectively deployed elsewhere – avoiding unnecessary purchases. You can also record accounting information (purchase details, lease and maintenance plans, and much more) for every PC.

The NetSupport DNA Mobile app also delivers information about a device's inventory and licenses, plus a full history of recent changes, as well as highlighting any outstanding alerts. It even provides a QR code creator to help quickly identify PCs.

Efficiency View

The Efficiency View dashboard helps you to see at a glance if your technology is being used efficiently – helping to reduce any wastage. Showing key data (i.e. how many PCs were left on out of hours, the number of unused PCs, those with the lowest spec/disk space, and more), it informs you where improved efficiency can create cost and time-saving benefits. You even can save and export the data as a report – making it easy to evidence improvements.

Save money on software licensing costs

NetSupport DNA keeps track of your installed licenses, helping you to reduce unnecessary spending on those that aren't needed – as well as avoid potential fines for using more than you own. And, for greater cost savings, it also highlights software that has no or low usage – avoiding costly renewals for applications you no longer need.

To help you track your software spending, NetSupport DNA can record all the "extras" associated with software management (e.g. supplier details, invoice details, contract renewal dates), giving you the opportunity to make active and considered decisions on renewals.

Why monitoring application use is good for your budget

Monitoring applications ensures software licenses are assigned to the right staff based on their usage level. It highlights who is using applications, programs and even store apps, more than others, allowing you to either reallocate applications to where they are needed or restrict use to specific devices and save additional license spend or maintenance renewals on under-used applications.

Do you know how much your business could save on energy costs?

NetSupport DNA's Energy Monitoring and Power Management tools keep you informed by showing you how many PCs are left on out of hours – and, most importantly, how the costs of this can significantly add up over time. You can set Power Management policies allowing selected PCs to be set to power off automatically and power back on – all at once, or in stages – the next morning. In addition, “inactivity policies” can be applied, allowing rules to be applied for systems to sleep, log out or power down if they have been inactive over a period of time. NetSupport DNA can begin to provide you with the awareness you need to start saving from day one.

\$50 lost per computer per year by not using sleep settings consistently. **That's \$5,000 per 100 computers!**

Alerts

Tackling big IT problems can take significant amounts of time – affecting staff and sometimes incurring financial costs. So, to help you work proactively to maintain your network (rather than fixing it reactively), NetSupport DNA gives you a complete alerting suite that allows you to monitor hundreds of scenarios and warn you when problems occur – or, better still, before they occur – to avoid lost productivity, such as when a particular PC or server is struggling (and any wider impact across your network); where license usage counts are reaching limits (to avoid any potential exposure to non-compliance fines) or when software has been uninstalled from a PC so it can be re-deployed elsewhere.

Cut your printing expenditure

Another easy save for businesses is to cut back on printing costs. Unnecessary printing can often spiral out of control, incurring high paper and toner costs. The high-level Print Monitoring component of NetSupport DNA shows you exactly where your print costs are being generated, allowing you to allocate funds accordingly.

“A typical office worker on average prints **10,000 pages annually**. **That's \$80 per person, per year.**”

All of your lease and contract details in one place – where they belong

NetSupport DNA bridges the gap between IT and Purchasing, allowing you to keep copies of actual lease and maintenance contracts (and other associated details) recorded alongside the correct devices and software licenses too. You can also include supplier details, contract term dates, and costs – increasing your awareness of renewal dates and allowing you to retain control and make active, informed decisions about future planning and spending.
